

## NPCIL's awareness campaign in non-elite school in Hindi language at Airoli institution elicits tons of gratitude

To the presenters of NPCIL, addressing students of under-privileged and non-elite schools is a humbling experience. A sizeable chunk of these students has grown up in dwellings where uninterrupted electricity is still a luxury. Their eyes dilate when you tell them that with a proper energy mix, the day is not far when all Indians will have access to unceasing electric supply. They are the ones most impressed and bewitched by the prospect of ample, clean and sustained energy.

It is this segment of young aspirants who is now the focus on NPCIL's awareness campaign. They study in Hindi or vernacular medium schools and expect the talk to be in the language of their comfort. The talks are planned and delivered to enhance their receptivity and comprehension.

CP&CC Directorate representative addressed a batch of 80 students of Jai Hind School in Airoli on the beneficial aspects of nuclear energy in Hindi language by making a factual comparison of the pros and cons of various sources. Synchronize as it did with the contents of their curriculum, the students and teachers profusely expressed their gratitude to NPCIL.

Industry-academia interactions in such schools are few and far between- this enhances their receptivity to our messages enormously.
