Ltd. make O-rings are used for sealing the high pressure boundaries in Oil and D2O circuits of Fuel Handling systems since beginning. We maintain spare stock of M/s Parker make O-rings for one to one replacement of used/old O-rings during our regular/scheduled maintenance activities. Various mechanical grooves, in which these O-rings will be installed, are designed as per the shape and size of M/s Parker Hannifin make O-rings. In all GA drawings (e.g. KAIGA3/35221/3010/GA, 2128/GA etc.) of Fuel Handling systems; O-rings are mentioned with Part numbers signifying its shape and size. These part numbers are of M/s Parker Hannifin Pvt. Ltd. make O-rings. O-rings of different make/model will not be suitable for one to one replacement and will not ensure proper sealing of pressure boundaries. Incidents of heavy water spillage have been reported in NPCIL sites where non-standard O-rings (not Parker make) have been used in Fuel Handling System. Therefore during the analysis of Heavy Water leakage/spillage by the Fuel Handling Standing Task Force (43rd FHSTF Meeting 8th & 9th February 2018); Task Force has specifically recommended for use of M/s Parker Hannifin make O-rings in Fuel Handling Systems. Hence for one to one replacements of M/s Parker make O-rings during servicing and maintenance activities; this indent has been raised. Competent authority is requested to review and concur above justification for procurement of M/s Parker make O-rings by processing this indent file in PT mode.	SME
